Dear Sir/Madam

BUILDING CONTROL (ENVIRONMENTAL SUSTAINABILITY) REGULATIONS - ADOPTION OF NEW CODE AND STANDARD & SUBMISSION REQUIREMENT

Objective

1 This circular is to inform the industry on the adoption of the following codes and standards for the compliance with the Building Control (Environmental Sustainability) Regulations. They are:

(i) BCA Green Mark Certification Standard for New Buildings (GM Version 4.1); and
(ii) Code for Environmental Sustainability of Buildings (3rd Edition)

Building works on GLS Programme that are subject to BCA Green Mark Certification Standard for New Buildings (GM Version 4.1)

2 The BCA Green Mark Certification Standard for New Buildings (GM Version 4.1) will apply to building works relating to any building on land sold under the Government Land Sales (GLS) Programme where the GLS tender closes **on or after 15 Jan 2013** in the following selected strategic areas :

(a) Marina Bay and Downtown Core ;
(b) Jurong Lake District (include Jurong Gateway);
(c) Kallang Riverside; and
(d) Paya Lebar Central

3 The building works mentioned in above paragraph 2 must meet the prescribed Green Mark certification as set out in The Schedule of the Building Control (Environmental Sustainability) Regulations before a TOP may be granted. The assessment of the environmental

performance of these building will have to be carried out based on the BCA Green Mark Certification Standard for New Buildings (GM Version 4.1), which is available in our website at http://www.bca.gov.sg/EnvSusLegislation/others/GM_Certification_Std2012.pdf. A summary of the main changes in comparison with the current version is attached at Annex A for reference.

Building works that are subject to Code for Environmental Sustainability of Buildings (3rd Edition)

4 The Code for Environmental Sustainability of Buildings (3rd Edition) will apply to any of the following building works where planning permissions are first submitted to Urban Redevelopment Authority (URA) **on or after 15 Jan 2013** :

(a) Building works which involve a gross floor area of 2,000m^2 or more;

(b) Building works which involve increasing the gross floor area of an existing building by 2,000m^2 or more; and

(c) Building works relating to an existing building which involve a gross floor area of 2,000m^2 or more; and the provision, extension or substantial alteration of the building envelope and building services.

5 The Code for Environmental Sustainability of Buildings (3rd Edition) is available in our website at: http://www.bca.gov.sg/EnvSusLegislation/others/Env_Sus_Code2012.pdf. A summary of the main changes in comparison with the current Code is attached at Annex B for reference.

Submission Requirement

6 Currently, the QP and other appropriate practitioners are required to jointly submit the Green Mark Score and declaration for the building works, stated in paragraph (4), together with the building plan for approval. To facilitate better understanding of the proposed building cooling system design and efficiency, we would like the cooling system information to be submitted in prescribed format by the appropriate practitioner (i.e PE(Mech), together with the Green Mark score calculation and declaration. Time extension can be considered if such details are not ready at the time of submission. The prescribed form is available in our website at:

http://www.bca.gov.sg/EnvSusLegislation/others/Air-Con_Info_Template.xls

7 The Code for Environmental Sustainability of Buildings (3rd Edition) has incorporated a separate non-residential building criteria that specifically cater to the design and construction of Transit Stations. With effect from **15 Jan 2013**, the Qualified Person and other appropriate practitioners handling such projects will use these criteria for compliance. These building works are required to meet the minimum Green Mark Score of 50 points and pre-requisite requirements prior to obtaining building plan approval and TOP clearance at later stage.

For Clarification

8. We would appreciate it if you could convey the contents of this circular to members of your organization. For clarification, you may email to bca_enquiry@bca.gov.sg or contact the following officers :

Annex A

Summary of the Main Changes

Green Mark for New Residential Building Criteria
Green Mark for New Non-Residential Building Criteria

Criteria / Requirements	Green Mark Version RB 4.0	Green Mark Version RB 4.1
1. VENTILATION SIMULATION METHODOLOGY Pre-requisite Requirement RB 1-2 APPENDIX C	1.1 To be eligible for Green Mark Platinum rating, it is a requirement to use ventilation simulation modeling and analysis to identify the most effective building design and layout. A minimum 80% of the selected typical dwelling units should have a weighted average wind velocity of 0.60 m/s. 1.2 The ventilation simulation modelling to be conducted based on the four prevailing wind directions for the building development namely North, North-East, South and South-East.	1.1 A minimum 70% of the selected typical dwelling units will be required in considering the weighted average wind velocity instead of 80%. 1.2 The ventilation simulation modelling can be conducted based on the two best prevailing wind directions for the building development that is North or North-East (N or NE) and South or South-East (S or SE).
Criteria / Requirements	**Green Mark Version NRB 4.0**	**Green Mark Version NRB 4.1**
2. AIR CONDITIONING SYSTEM SCORING AND METHODOLOGY NRB 1-2 (a) – Water Cooled Chilled-Water Plant	2.1 Scoring methodology was based on the cooling load profile for a design peak day, building operating hours specified and the chilled water plant efficiency at full load condition or part load condition	2.1 Scoring methodology was revised to consider the building cooling load profile for a typical week and building operating hours specified. The Design System Efficiency (DSE) of the proposed air-conditioning system will be based on the total average cooling load and total power inputs of the various system components. For potential Green Mark Gold^{Plus} and Platinum projects, the scoring will be based on the Design System Efficiency (DSE) derived using the energy modeling framework set out in Appendix E.

<tr><td>10. NEW CRITERIA FOR TRANSIT STATIONS</td><td>No prior provision that caters specially for transit stations under Non Residential Building Criteria</td><td><u>NEW PROVISION</u>
New criteria on Transit Stations comprise five environmental impact categories namely Energy Efficiency, Water Efficiency, Environmental Protection, Indoor Environmental Quality and Other Green Features that cater to the design and construction of Transit Station were incorporated. Prerequisite requirements on the minimum design system efficiency (DSE) of air-conditioning system are stipulated and outlined below :

(i) For Transit Stations using Water Cooled Chilled-Water Plant:
<table>
<tr><th rowspan="3">Minimum Central Chilled-Water Plant Efficiency</th><th colspan="3">Peak Building Cooling Load (RT)</th></tr>
<tr><th>< 300</th><th>≥ 300 & < 500</th><th>≥ 500</th></tr>
<tr><th colspan="3">Design System Efficiency(kW/RT)</th></tr>
<tr><td></td><td>0.85</td><td>0.80</td><td>0.7</td></tr>
</table>
(ii) For Transit Stations using Unitary Air-Conditioners:
<table>
<tr><th rowspan="3">Minimum System Efficiency of Unitary Air-Conditioners</th><th colspan="2">Peak Building Cooling Load (RT)</th></tr>
<tr><th>< 500</th><th>≥ 500</th></tr>
<tr><th colspan="2">Design System Efficiency(kW/RT)</th></tr>
<tr><td>0.90</td><td>0.80</td></tr>
</table></td></tr>
</table>
