## See Distribution List

Dear Sir/Madam

## **CALL FOR INDUSTRY COMMENTS ON PROPOSED CHANGES TO ENVIRONMENTAL SUSTAINABILITY REQUIREMENTS FOR NEW BUILDING DEVELOPMENTS AND EXISTING BUILDINGS**

### **Objective**

The Building and Construction Authority (BCA) would like to seek industry comments on the proposed changes to the Code for Environmental Sustainability of Buildings.

### **Background**

2. The legislation on Environmental Sustainability was first introduced in 2008 as part of the key initiatives under the earlier Green Building Masterplans to advance sustainable building development. With this legislation, new buildings and existing buildings with major retrofits with Gross Floor Area (GFA) of 2,000m<sup>2</sup> and above are required to meet the minimum environmental sustainability standard<sup>1</sup>. It was subsequently enhanced to include existing buildings with major energy use change (i.e. chiller installation or retrofits) with GFA of 5000m<sup>2</sup> or more in 2017<sup>2</sup>. The Codes for Environmental Sustainability requirements that set out the minimum environmental sustainability standards were put in place for regulatory compliance in support of these requirements.

---

<sup>1</sup> Under the Building Control (Environmental Sustainability) Regulations 2008, building works are to be designed and constructed to meet the minimum environmental sustainability standard. The compliance forms part of the building plan approval and TOP/CSC clearance. Major retrofits refer to building works that involve provision, extension or substantial alteration of the building envelope and building services in/in connection with an existing building.

<sup>2</sup> Under the Building Control (Environmental Sustainability Measures for Existing Buildings) Regulations 2013, the compliance with the minimum environmental sustainability standard is required when there is an installation and replacement of building cooling system for all buildings except for the following building types : industrial, residential (excluding serviced apartments), railway, port, airport services and facilities, religious building, data centre and utility buildings. It was implemented in phases, starting with large commercial buildings with GFA of 15,000 m<sup>2</sup> or more in 2014 followed by those with GFA of 5000 m<sup>2</sup> or more in 2017.

3. In 2020, BCA and the Singapore Green Building Council (SGBC) have co-led the co-creation of the next Singapore Green Building Masterplan<sup>3</sup> (SGBMP) with stakeholders from the public, private and people sectors, including Trade Associations and Chambers (TACs). One of the key initiatives under the SGBMP is to review the environmental sustainability requirements to support the strive towards more energy efficient buildings.

4. As part of the Whole of Government (WOG) initiatives in mitigating the effects of climate change, we will streamline the Code requirements to focus on sustainability indicators which would help drive better building energy efficiency and carbon reduction potential to support the transition to a more sustainable, low-carbon Built Environment.

### **Industry Consultation**

5. Earlier, the SGBMP working committees have contributed to the setting of energy efficiency measures for buildings. Several industry practitioners were also engaged and have provided their feedback on the areas of improvements to the Code requirements.

6. Further, we would also like to take the opportunity to disseminate the proposed changes to building professionals and members of various Trade Associations and Chambers (TACs) for further inputs and comments before finalising the Code requirements.

### **Consultation Details and Closing Date for Comments**

7. Please see Annex A and B on the proposed compliance framework and summary of the changes for further feedback.

8. Building professionals and members of TACs can send their views and inputs using the [feedback form](#) or email to [bca\\_gm\\_efiling@bca.gov.sg](mailto:bca_gm_efiling@bca.gov.sg) by **20 Apr 2021**.

### **For Clarification**

9. We would appreciate it if you could convey the contents of this circular to the members of your organisation. For clarification, please submit your enquiry through [BCA's Online Feedback Form](#) or call us at 1800 342 5222.

Yours faithfully

JEFFERY NENG  
DIRECTOR (COVERING)  
GREEN MARK DEPARTMENT  
ENVIRONMENTAL SUSTAINABILITY GROUP  
for COMMISSIONER OF BUILDING CONTROL

---

<sup>3</sup> The SGBMP is part of the Singapore Green Plan 2030 which aims to strengthen our existing national sustainability efforts.

# INDUSTRY CONSULTATION

## Proposed Changes to the Code for Environmental Sustainability of Buildings

Under Building Control (Environmental Sustainability) Regulations 2008

# 1. Overview of Compliance Framework

## 1.1 Minimum Environmental Sustainability Standard

The level of environmental performance that meets all relevant Base Requirements and a selected number of sustainability indicators provided under the Carbon Reduction Measures are deemed to have met the minimum environmental sustainability standard of 50 points as prescribed in the Regulations.

## 1.2 Specific Requirements for Different Building Types

The required level of environmental performance will depend on the building works in relation to the building types and as follows :

Residential Buildings	Non-Residential Buildings
All Base Requirements where relevant	All Base Requirements where relevant
*4 Carbon Reduction Measures in total with at least two (2) options from Sustainable Construction and one (1) option each from Sustainable Design Strategies and Technologies	*4 Carbon Reduction Measures in total with at least two (2) options from Sustainable Construction and one (1) option each from Sustainable Design Strategies and Technologies
<p><i>*Not applicable for building works that only involve the erection of simple structures and buildings solely used for specific functions and as listed below :</i></p> <ul style="list-style-type: none"> <li>• <i>Link ways</i></li> <li>• <i>Underground passes</i></li> <li>• <i>Open sheds</i></li> <li>• <i>Standalone substation</i></li> <li>• <i>Lift upgrading</i></li> </ul>	
<p><b>Mixed Use Buildings</b></p> <p>Each part of the building works in relation to the residential and non-residential buildings shall be regarded as separate building works. The level of environmental performance shall be in accordance with the requirements set for each part of the buildings works.</p>	

## 2. Base Requirements

### 2.1 Environmental Sustainability Attributes

The Base Requirements comprises environmental sustainability attributes that are to be complied with, where applicable. The details are provided in the following Table 2.1.1 and Table 2.2.2 for the respective building types.

Table 2.1.1 – Base Requirements for Residential Buildings							
SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE						
<b>RB01 Building Energy Performance</b>							
A building shall be designed and constructed with energy efficiency measures to reduce energy consumption of building energy systems	Energy performance of building energy systems						
<b>RB01-1 Air-Conditioning System</b>							
Reduce energy required for space cooling by providing energy efficient air-conditioning systems that could meet the following energy performance standard or equivalent.	Air-conditioning system for at least 80% of the total number of dwelling units and common facilities						
<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2">Design System Efficiency (TDSE)</th> </tr> </thead> <tbody> <tr> <td>Single/ Multi Spilt System</td> <td>5 ticks rated</td> </tr> <tr> <td>Variable Refrigerant Flow (VRF) system</td> <td>3 ticks rated</td> </tr> </tbody> </table>	Design System Efficiency (TDSE)		Single/ Multi Spilt System	5 ticks rated	Variable Refrigerant Flow (VRF) system	3 ticks rated	
Design System Efficiency (TDSE)							
Single/ Multi Spilt System	5 ticks rated						
Variable Refrigerant Flow (VRF) system	3 ticks rated						
<p>Note :</p> <p>(1) The single/multi-spilt air conditioners and VRF system are to be rated and labelled with Energy Label as required under the Mandatory Energy Labelling Scheme administered by NEA.</p> <p>(2) Other systems such as centralised cooling system are to meet the design system efficiency standard that is equivalent to VRF system of 3 ticks rating.</p>							
<b>RB01-2 Lighting System for Common Facilities and Areas</b>							
Reduce energy required to illuminate spaces in common facilities and areas with proper lighting level. The lighting provision shall be at least 40% more energy efficient than the prescribed lighting power budget stated in SS 530 – Code of Practice for Energy Efficiency Standard for Building Services and Equipment.	Lighting system for common facilities and areas, building façade and landscape.						
Lighting provision for building façade and landscape are to comply with the prescribed lighting power budget stated in SS 530.							
<b>RB01-3 Mechanical Ventilation System for Carpark Areas</b>							
Reduce energy required by regulating the demand for mechanical ventilation in carpark areas by way of CO detection sensor control with Variable Speed Drive (VSD).	Mechanical ventilation system for carpark areas						
<b>RB01-4 Vertical Transportation System</b>							
Reduce energy consumption by providing energy efficient vertical transportation systems that are equipped with variable voltage variable frequency (VVVF) drives and sleep mode features.	Lift systems that serve four (4) floors or more						

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE												
<b>RB02 Envelope and Roof Thermal Transfer</b>													
A building shall be designed and constructed with good thermal performance to reduce solar heat gain through its building envelope and roof.	Thermal performance of building envelope and roof												
<b>RB02-1 Building Envelope</b>													
<p>Minimise heat gain through building envelope to enhance thermal comfort and to reduce the energy needed to condition the indoor environment when required.</p> <p>(a) The building envelope is to be designed with Residential Envelope Transmittance Value (RETV) of no more than 22 W/m<sup>2</sup> based on the methodology stated in the Code on Envelope Thermal Performance for Buildings;</p> <p>OR</p> <p>(b) The building envelope designed is deemed to have satisfied the performance requirements if it meets the following criteria :</p> <table border="1" data-bbox="282 970 927 1327"> <thead> <tr> <th>Window to Wall Ratio (WWR)</th> <th>Shading Coefficients of Glass (SC<sub>glass</sub>)</th> </tr> </thead> <tbody> <tr> <td>&lt; 0.30</td> <td>≤ 0.67</td> </tr> <tr> <td>0.30 to &lt; 0.35</td> <td>≤ 0.59</td> </tr> <tr> <td>0.35 to &lt; 0.40</td> <td>≤ 0.52</td> </tr> <tr> <td>0.40 to &lt; 0.45</td> <td>≤ 0.48</td> </tr> <tr> <td>0.45 to ≤ 0.50</td> <td>≤ 0.43</td> </tr> </tbody> </table>	Window to Wall Ratio (WWR)	Shading Coefficients of Glass (SC <sub>glass</sub> )	< 0.30	≤ 0.67	0.30 to < 0.35	≤ 0.59	0.35 to < 0.40	≤ 0.52	0.40 to < 0.45	≤ 0.48	0.45 to ≤ 0.50	≤ 0.43	Building envelope design
Window to Wall Ratio (WWR)	Shading Coefficients of Glass (SC <sub>glass</sub> )												
< 0.30	≤ 0.67												
0.30 to < 0.35	≤ 0.59												
0.35 to < 0.40	≤ 0.52												
0.40 to < 0.45	≤ 0.48												
0.45 to ≤ 0.50	≤ 0.43												
<b>RB02-2 Roof</b>													
<p>The average thermal transmittance (U-Value) of roof shall not exceed the prescribed limits as stated below :</p> <table border="1" data-bbox="227 1512 1040 1736"> <thead> <tr> <th>Roof Weight Group</th> <th>Weight Range (kg/m<sup>2</sup>)</th> <th>Maximum U- value (W/m<sup>2</sup>k)</th> </tr> </thead> <tbody> <tr> <td>Light</td> <td>&lt;50</td> <td>0.8</td> </tr> <tr> <td>Medium</td> <td>50 to 230</td> <td>1.1</td> </tr> <tr> <td>Heavy</td> <td>&gt;230</td> <td>1.5</td> </tr> </tbody> </table>	Roof Weight Group	Weight Range (kg/m <sup>2</sup> )	Maximum U- value (W/m <sup>2</sup> k)	Light	<50	0.8	Medium	50 to 230	1.1	Heavy	>230	1.5	Roof design
Roof Weight Group	Weight Range (kg/m <sup>2</sup> )	Maximum U- value (W/m <sup>2</sup> k)											
Light	<50	0.8											
Medium	50 to 230	1.1											
Heavy	>230	1.5											

Table 2.1.2 – Base Requirements for Non-Residential Buildings	
SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<b>NRB01 Building Energy Performance</b>	
<p>A building shall be designed and constructed with energy performance that meet minimum energy improvements of 50% over 2005 baseline. This can be translated to 30% energy savings over current Singapore Standard and baseline.</p> <p>Compliance Level</p> <p>Compliance Options</p> <div style="text-align: center;"> <pre> graph TD     A["Building Energy Performance 50% energy improvement over 2005 baseline"] --&gt; B["Performance Based Approach"]     A --&gt; C["Deemed-to-satisfy Provision"]     B --&gt; D["Energy Savings using Energy Modelling Methodology"]     C --&gt; E["Energy Performance Standards for Key Building Systems"] </pre> </div> <p>The compliance with this requirement shall be demonstrated by way of energy modelling methodology or by meeting the respective performance standards set for key energy systems set out in the following sections.</p>	<p>Energy performance of building energy systems</p>
<b>NRB01-1 Performance Based Approach via Energy Modelling</b>	
<p>Facilitate energy load reduction strategies and cost-effective design decision at design stage to meet minimum energy savings of 30% as compared with its reference model based on prevailing Singapore Standard and baseline.</p> <p>The demonstration of the energy savings requirement shall be conducted via energy modelling in accordance with the framework set out in accordance with the Energy Modelling Methodology and Requirements.</p> <p>For buildings with cooling provision that tap on District Cooling System (DCS) operated by supplier of district cooling services that are subject to the District Cooling Act and/or Energy Conservation Act (ECA), the energy performance of the DCS can be excluded in the energy modelling simulation.</p> <p><i>(Note: The energy modelling methodology and requirement will be enhanced and incorporated in the Code for compliance. At this juncture, you may wish to refer to the Energy Modelling Methodology in GM NRB2015 as a reference for better understanding.)</i></p>	<p>Building energy systems that are stated in the energy modelling methodology and requirements</p>

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE																																		
<p><b>NRB01-2 Energy Performance Standards for Key Building Systems</b></p> <p>Facilitate energy load reduction with provision of enhanced energy efficient active systems and equipment that could contribute towards meeting a minimum energy savings of 30% as compared with its reference model based on prevailing Singapore Standard and baseline.</p>	<p>Key building system provisions stated in the following sub-sections</p>																																		
<p><b>NRB01-2(a) Air-Conditioning System</b></p> <p>Reduce energy required to provide and distribute conditioned air within the space by having energy efficient air-conditioning system.</p> <p>(i) Water-Cooled Building Cooling system</p> <ul style="list-style-type: none"> <li>• Water-Cooled Chiller</li> <li>• Chilled Water Pump</li> <li>• Condenser Water Pump</li> <li>• Cooling Tower</li> <li>• Air-Distribution System</li> </ul> <table border="1" data-bbox="245 852 1105 1079"> <thead> <tr> <th colspan="2" data-bbox="245 852 1105 940"><b>Total Design System Efficiency (TDSE) for Water-Cooled Building Cooling System</b></th> </tr> <tr> <th data-bbox="245 940 602 1020">New Buildings</th> <th data-bbox="602 940 1105 1020">Existing Buildings with New Extension and Major Retrofits</th> </tr> </thead> <tbody> <tr> <td data-bbox="245 1020 602 1079">0.85 kW/RT</td> <td data-bbox="602 1020 1105 1079">0.9 kW/RT</td> </tr> </tbody> </table> <p>where the minimum water-cooled chilled water plant efficiency for new commercial buildings is 0.63 kW/RT. As for other building developments, the minimum plant efficiency will be based on the chilled water supply temperature and as follows :</p> <table border="1" data-bbox="235 1308 1092 1493"> <thead> <tr> <th colspan="7" data-bbox="235 1308 1092 1346"><b>Minimum Water-Cooled Chilled Water Plant Efficiency <math>\eta_c</math></b></th> </tr> <tr> <th data-bbox="235 1346 342 1402">Commercial Buildings</th> <th colspan="5" data-bbox="342 1346 846 1402">Other Building Developments</th> <th data-bbox="846 1346 1092 1402"></th> </tr> <tr> <td data-bbox="235 1402 342 1493"></td> <th data-bbox="342 1402 537 1440">Chilled Water Temp (°C)</th> <th data-bbox="537 1402 602 1440">6</th> <th data-bbox="602 1402 659 1440">7</th> <th data-bbox="659 1402 716 1440">8</th> <th data-bbox="716 1402 773 1440">9</th> <th data-bbox="773 1402 846 1440">10</th> </tr> </thead> <tbody> <tr> <td data-bbox="235 1440 342 1493">0.63</td> <td data-bbox="342 1440 537 1493">Water-Cooled Chiller System Efficiency (kW/RT)</td> <td data-bbox="537 1440 602 1493">0.68</td> <td data-bbox="602 1440 659 1493">0.67</td> <td data-bbox="659 1440 716 1493">0.66</td> <td data-bbox="716 1440 773 1493">0.65</td> <td data-bbox="773 1440 846 1493">0.64</td> </tr> </tbody> </table> <p>For buildings with cooling provision that tap on District Cooling System (DCS), the TDSE requirement does not apply but the air-distribution system efficiency must meet the minimum energy performance standard of 0.25 kW/RT.</p> <p>(ii) Air-Cooled Building Cooling System</p> <ul style="list-style-type: none"> <li>• Unitary Air-Conditioners (Single or combination of systems) <ul style="list-style-type: none"> <li>○ Variable Refrigerant Flow (VRF) system</li> <li>○ Single – Spilt Units</li> <li>○ Multi-Spilt Units</li> <li>○ Air-Distribution System</li> </ul> </li> </ul>	<b>Total Design System Efficiency (TDSE) for Water-Cooled Building Cooling System</b>		New Buildings	Existing Buildings with New Extension and Major Retrofits	0.85 kW/RT	0.9 kW/RT	<b>Minimum Water-Cooled Chilled Water Plant Efficiency <math>\eta_c</math></b>							Commercial Buildings	Other Building Developments							Chilled Water Temp (°C)	6	7	8	9	10	0.63	Water-Cooled Chiller System Efficiency (kW/RT)	0.68	0.67	0.66	0.65	0.64	<p>Air-conditioning system and cooling provision from existing air-conditioning system and district cooling system that serve new buildings or floor areas</p>

<p><b>NRB01-2(b) Lighting System</b></p>									
<p>Reduce energy required to illuminate interior spaces with proper lighting level. The lighting provision shall be at least 40% more energy efficient than the prescribed lighting power budget stated in SS 530 – Code of Practice for Energy Efficiency Standard for Building Services and Equipment.</p> <p>Lighting provision for building façade and landscape are to comply with the prescribed lighting power budget stated in SS 530.</p>	<p>Lighting systems for interior spaces, building facades and landscape</p>								

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE														
<b>NRB01-2(c) Mechanical Ventilation System</b>															
<p>Reduce energy required to supply and distribute fresh air within the space by having energy efficient mechanical ventilation system and controls.</p> <p>(i) Provision of mechanical ventilation system of at least 10% more energy efficient than the prescribed standard stated in SS 553 for normally occupied spaces that utilise mechanical ventilation as the preferred ventilation mode.</p> <p>(ii) Provision of Carbon Monoxide (CO) detection sensor control with Variable Speed Drive (VSD) to regulate demand for mechanical ventilation in carpark areas.</p>	Mechanical ventilation systems for normally occupied spaces and carpark areas														
<b>NRB01-2(d) Vertical Transportation System</b>															
Reduce energy consumption by providing energy efficient vertical transportation systems that are equipped with variable voltage variable frequency (VVVF) drives and sleep mode features.	Lifts and escalators														
<b>NRB02 Envelope and Roof Thermal Transfer</b>															
A building shall be designed and constructed with good thermal performance to reduce solar heat gain through the building envelope and roof.	Thermal performance of building envelope and roof														
<b>NRB02-1 Building Envelope</b>															
<p>Minimise heat gain through building envelope to enhance thermal comfort and to reduce the energy needed to condition the indoor environment.</p> <p>(a) The building envelope is to be designed with Envelope Thermal Transfer Value (ETTV) of not more than 45 W/m<sup>2</sup> based on the methodology stated in the Code on Envelope Thermal Performance for Buildings ;</p> <p>OR</p> <p>(b) The building envelope designed is deemed to have satisfied the performance requirements if it meets the following criteria :</p> <table border="1" data-bbox="250 1566 1040 1959"> <thead> <tr> <th>Window to Wall Ratio (WWR)</th> <th>Shading Coefficients of Glass (SC<sub>glass</sub>)</th> </tr> </thead> <tbody> <tr> <td>&lt; 0.20</td> <td>≤ 0.51</td> </tr> <tr> <td>0.20 to &lt; 0.25</td> <td>≤ 0.41</td> </tr> <tr> <td>0.25 to &lt; 0.30</td> <td>≤ 0.35</td> </tr> <tr> <td>0.30 to &lt; 0.35</td> <td>≤ 0.30</td> </tr> <tr> <td>0.35 to ≤ 0.40</td> <td>≤ 0.27</td> </tr> <tr> <td>0.40 to ≤ 0.50</td> <td>≤ 0.22</td> </tr> </tbody> </table>	Window to Wall Ratio (WWR)	Shading Coefficients of Glass (SC <sub>glass</sub> )	< 0.20	≤ 0.51	0.20 to < 0.25	≤ 0.41	0.25 to < 0.30	≤ 0.35	0.30 to < 0.35	≤ 0.30	0.35 to ≤ 0.40	≤ 0.27	0.40 to ≤ 0.50	≤ 0.22	Building envelope design
Window to Wall Ratio (WWR)	Shading Coefficients of Glass (SC <sub>glass</sub> )														
< 0.20	≤ 0.51														
0.20 to < 0.25	≤ 0.41														
0.25 to < 0.30	≤ 0.35														
0.30 to < 0.35	≤ 0.30														
0.35 to ≤ 0.40	≤ 0.27														
0.40 to ≤ 0.50	≤ 0.22														

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE												
<b>NRB02-2 Roof</b>													
<p>Minimise heat gain through roof to reduce the energy needed to condition the indoor environment.</p> <p>(a) The roof with skylights is to be designed with Roof Thermal Transfer Value (RTTV) of not more than 50 W/m<sup>2</sup> based on the methodology stated in the Code on Envelope Thermal Performance for Buildings.</p> <p>(b) For roof without skylights, the average thermal transmittance (U-Value) of roof shall not exceed the prescribed limits as stated below :</p> <table border="1" data-bbox="253 659 987 884"> <thead> <tr> <th>Roof Weight Group</th> <th>Weight Range (kg/m<sup>2</sup>)</th> <th>Maximum U-value (W/m<sup>2</sup>k)</th> </tr> </thead> <tbody> <tr> <td>Light</td> <td>&lt;50</td> <td>0.5</td> </tr> <tr> <td>Medium</td> <td>50 to 230</td> <td>0.8</td> </tr> <tr> <td>Heavy</td> <td>&gt;230</td> <td>1.2</td> </tr> </tbody> </table>	Roof Weight Group	Weight Range (kg/m <sup>2</sup> )	Maximum U-value (W/m <sup>2</sup> k)	Light	<50	0.5	Medium	50 to 230	0.8	Heavy	>230	1.2	Roof design with and without skylights
Roof Weight Group	Weight Range (kg/m <sup>2</sup> )	Maximum U-value (W/m <sup>2</sup> k)											
Light	<50	0.5											
Medium	50 to 230	0.8											
Heavy	>230	1.2											
<b>NRB03 Air-tightness and Leakage</b>													
<p>A building shall be designed and constructed with energy conservation measures to reduce air leakage through doors, windows and other openings on the building envelope.</p>	Measures to minimise air infiltration												
<b>NRB03-1 Windows and Curtain Walls</b>													
<p>Minimise air infiltration through building envelope by way of effective means of weather-stripping of windows and curtain walls.</p> <p>The windows and curtain walls shall be designed to ensure that the air leakage rates do not exceed the limits specified in the following standards.</p> <p>(a) SS 212 – Specification for Aluminum Alloy Windows</p> <p>(b) SS 381 – Material and Performance Tests for Aluminum Curtain Walls</p>	Windows and curtain walls – Component testing												
<b>NRB03-2 Openings between conditioned and non-conditioned spaces</b>													
<p>Conditioned air is to be well confined to minimise heat gain due to warmer infiltration of air into the space with appropriate mitigation measures.</p> <p>Building entrances and door openings to building exterior or non air-conditioned spaces and the like, shall</p> <p>(a) be provided with doors that are equipped with automated technology or self-closing devices with the use of pressure independent control valve and energy meters to measure the consumption of fan coiled units (FCUs) within the tenanted space, where relevant; and</p>	Building entrances and door openings to building exterior or non-air-conditioned spaces												

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<p>(b) be equipped with enclosed vestibules or air lock rooms for doorway with high pedestrian traffic flow*. The interior door and exterior door should have a minimum distance of not less than 2.5 m apart.</p> <p>* Doorway with high pedestrian traffic flow refers to main entrances and those leading to transport nodes or other commercial buildings.</p>	
<b>NRB04 Measurement and Verification (M &amp; V) Instrumentation</b>	
Facilitate energy management and monitoring of air-conditioning system operating efficiency with the provision of permanent measuring instrumentation.	Energy measurement and management of air-conditioning systems
<b>NRB04-1 Instrumentation for Chilled Water Air-Conditioning System</b>	
<p>Provision of permanent measuring instruments for monitoring of the energy performance of the chilled water plants and air distribution systems.</p> <p>The installed instrumentation must have the capability to calculate the resultant system efficiency within 5% of its true value in accordance with SS 591: 2013. Each measurement system shall include sensors, any signal conditioning, data acquisition system and the wiring connecting these components.</p> <p>The permanent measuring instruments and devices are to be accessible<sup>see note (5)</sup> and must not be located directly above the chillers, to facilitate verification and maintenance. They must be installed in accordance with the manufacturers' recommendation and SS 591: 2013. The measurement systems provided shall also comply with the following requirement:</p> <ul style="list-style-type: none"> <li>(a) All data logging with capability to trend at 1-minute sampling time interval, and recorded to the 3rd decimal digit;</li> <li>(b) Building management system (BMS), standalone energy monitoring system (EMS) or local sequential controller (LSC) shall have capability to compute and display of key indicators including total system energy efficiency and its component (water-side and air-side efficiency) as well as the calculated heat balance of the chilled water system;</li> <li>(c) Magnetic in-line flow meter, with 1% uncertainty and capable of electronic in-situ verification to within <math>\pm 2\%</math> of its original factory calibration. If installation of magnetic in-line meters is not possible, ultrasonic flow meters or other flow meters that can meet the indicated performance may be used;</li> </ul>	Instrumentation for Water cooled and air cooled chilled water plant and/or air-distribution system

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<p>(d) Temperature sensors are to be provided for chilled water and condenser water loop and shall have an end-to-end measurement uncertainty within <math>\pm 0.05^{\circ}\text{C}</math> over the entire measurement range. Each temperature measurement location shall have test-plugs or additional thermowells located before and after each temperature sensor along the chilled water and condenser water lines for verification of measurement accuracy. All thermo-wells shall be installed in a manner that enables the sensors to be in direct contact with fluid flow; and</p> <p>(e) Dedicated power meters (of IEC Class 1 or better) and metering current transformers (of Class 1 or better) where applicable, are to be provided for each of the following groups of equipment where applicable: chillers, chilled water pumps, condenser water pumps, cooling towers, air-distribution sub-system (i.e. AHUs, PAHUs, FCUs <sup>see note 6</sup>).</p> <p>Note :</p> <p>(5) The temperature sensors are best placed in an accessible location with mounting height of not more than 3m, where possible. Otherwise, there should be evidence of provision for access by way of mobile platform or other suitable form.</p> <p>(6) Where the FCUs' power consumption could not be metered or provided, the evidences of nameplate power can be used to derive the air-distribution efficiency without the need of sub-metering.</p> <p>(7) For buildings with cooling provision that tap on District Cooling System (DCS), only the relevant instrumentation in relation to the proposed buildings is applicable.</p> <p>(8) Upon project completion, a heat balance substantiating test can be carried out to ascertain the accuracy of the M &amp; V instrumentation provided for the central chilled water system. To meet the accuracy requirement, more than 80% of the heat balance (%) derived over the entire normal operating hours is to be within <math>\pm 5\%</math> for a period of one (1) week.</p>	
<p><b>NRB04-2 Instrumentation for Variable Refrigerant Flow (VRF) System</b></p>	
<p>Provision of permanent measuring instruments for monitoring of the energy performance of the Variable Refrigerant Flow (VRF) condensing units and air-distribution systems.</p> <p>The installed instrumentation must have the capability to calculate the resultant system efficiency within 10% uncertainty. Each measurement system shall include sensors, any signal conditioning, data acquisition system and the wiring connecting these components.</p> <p>The measurement systems provided shall also comply with the following requirement:</p> <p>(a) All data logging with capability to trend at 5-minute sampling time interval, and recorded to the 3rd decimal digit;</p>	<p>Instrumentation for VRF systems which serve an aggregate conditioned floor areas of 2000 m<sup>2</sup> or more.</p>

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE										
<p>(b) Building management system (BMS), standalone energy monitoring system (EMS) shall have capability to compute and display of the overall system energy efficiency and to facilitate data extraction for verification purpose; and</p> <p>(c) Dedicated power meters (of IEC Class 1 or better) and metering current transformers (of Class 1 or better) where applicable, are to be provided for all condensing units of the VRF system and air-distribution sub-systems (i.e. AHUs, PAHUs, FCUs <sup>see note 6</sup>).</p>											
<b>NRB05 Electrical Submetering</b>											
<p>Facilitate measurement and monitoring of major energy end uses for energy management and audit. Separate sub-meters shall be provided and linked to a monitoring system that can measure and trend energy consumption data of the following systems:</p> <table border="1" data-bbox="198 856 1084 1612"> <thead> <tr> <th colspan="2" data-bbox="198 856 1084 903">Sub-System for Metering</th> </tr> </thead> <tbody> <tr> <td data-bbox="198 903 516 982">Lifts and escalators</td> <td data-bbox="522 903 1084 982">More than 5 numbers or sets or with sum of all feeders &gt; 50 kVA.</td> </tr> <tr> <td data-bbox="198 982 516 1255">Mechanical Ventilation Systems</td> <td data-bbox="522 982 1084 1255">           Total subsystem's load &gt; 15 kW            Sub-metering applicable to individual fan system motors that are more than 1.5 kW in the following areas           <ul style="list-style-type: none"> <li>• Normally Occupied Spaces</li> <li>• M &amp; E Plant Rooms</li> <li>• Carparks</li> </ul> </td> </tr> <tr> <td data-bbox="198 1255 516 1339">Centralised hot water supply system</td> <td data-bbox="522 1255 1084 1339">&gt; 50 kW thermal heating capacity</td> </tr> <tr> <td data-bbox="198 1339 516 1612">General power supply and lighting systems for tenancy areas and owners' premises</td> <td data-bbox="522 1339 1084 1612">Sub-metering for tenancy areas and owners' premises are to be separated. The sub-circuits serving these areas can be provided based on sub-system basis and /or per floor level.</td> </tr> </tbody> </table> <p>Note:</p> <p>(9) If there is a need to cater to high plug loads or process loads exceeding 50 kVA in areas such as manufacturing, carpark, data centre, EV charging stations, please provide separate sub-metering for these specific areas to better manage the energy consumption, where relevant.</p> <p>(10) The provision of sub-metering for chiller plant systems and VRF system are covered under NRB04.</p>	Sub-System for Metering		Lifts and escalators	More than 5 numbers or sets or with sum of all feeders > 50 kVA.	Mechanical Ventilation Systems	Total subsystem's load > 15 kW Sub-metering applicable to individual fan system motors that are more than 1.5 kW in the following areas <ul style="list-style-type: none"> <li>• Normally Occupied Spaces</li> <li>• M &amp; E Plant Rooms</li> <li>• Carparks</li> </ul>	Centralised hot water supply system	> 50 kW thermal heating capacity	General power supply and lighting systems for tenancy areas and owners' premises	Sub-metering for tenancy areas and owners' premises are to be separated. The sub-circuits serving these areas can be provided based on sub-system basis and /or per floor level.	<p>Energy measurement and management of other building energy systems</p>
Sub-System for Metering											
Lifts and escalators	More than 5 numbers or sets or with sum of all feeders > 50 kVA.										
Mechanical Ventilation Systems	Total subsystem's load > 15 kW Sub-metering applicable to individual fan system motors that are more than 1.5 kW in the following areas <ul style="list-style-type: none"> <li>• Normally Occupied Spaces</li> <li>• M &amp; E Plant Rooms</li> <li>• Carparks</li> </ul>										
Centralised hot water supply system	> 50 kW thermal heating capacity										
General power supply and lighting systems for tenancy areas and owners' premises	Sub-metering for tenancy areas and owners' premises are to be separated. The sub-circuits serving these areas can be provided based on sub-system basis and /or per floor level.										

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<b>NRB06 Maintenance of Building Cooling System Performance</b>	
<p>Ensure adequate service clearances so that the building cooling system performance can be maintained during operation as designed.</p> <p><i>Service clearances are to be provided as per manufacturers' specification or prescribed standards stated in the following clauses, whichever governs.</i></p>	<p>Space requirement for water-cooled and air-cooled chilled water systems</p>
<b>NRB06-1 Chillers</b>	
<p>Access space provisions are as follows :</p> <ul style="list-style-type: none"> <li>(a) Clear space of 2 m or more at the front of chiller unit piping section for tube maintenance and cleaning, repair and replacement of bigger components;</li> <li>(b) Clearance of 1.2 m or more between the chillers measured from plinth to plinth for regular maintenance; and</li> <li>(c) Overhead service clearance of 1.5 m or more above the chiller for overhaul maintenance.</li> </ul>	<p>Chillers</p>
<b>NRB06-2 Pump Systems</b>	
<p>Access space provisions are as follows :</p> <ul style="list-style-type: none"> <li>(a) Except for the areas where the pipes are connected, a clearance of 0.6 m or more is to be provided round the pump for regular maintenance; and</li> <li>(b) Clear head room space of 1 m or more above the pump and motor to facilitate overhaul maintenance or replacement.</li> </ul>	<p>Chilled water pumps (CHWP) and condensers water pumps (CWP)</p>
<b>NRB06-3 Cooling Towers</b>	
<p>Maintenance provisions are as follows :</p> <ul style="list-style-type: none"> <li>(a) Provision of maintenance platform, stairs and catwalks of 600 mm width or more with handrails around the cooling towers and access to the level for periodic maintenance, inspection of water basin and fill media; and</li> <li>(b) Clear space of 2 m or more from the top of cooling towers to location of the trellis, where applicable.</li> </ul> <p>Note (11) : Proper clearances on all sides of the cooling tower should be provided in accordance with manufacturer's technical recommendation to ensure the heat rejection performance of cooling towers is not affected or should not be less than the lateral width of the cooling tower, whichever governs.</p>	<p>Cooling towers</p>

**NRB06-4 Air-Distribution Systems**

Air handling units (AHU) of cooling capacity greater than 35 kW shall be floor mounted as stipulated in SS 553. The access space provisions are as follows :

- (a) AHU access – Provide minimum 1m clear space from the AHU room door entrance to the AHU for general maintenance;
- (b) Cooling coil pipe and filter access – Provide minimum 800 mm clear space after pipe connection to facilitate cooling coil cleaning and filter access;
- (c) Fan access – Provide minimum 800 mm clear space for fan/motor access and maintenance (if the access is not from cooling coil connection side); and
- (d) AHU side and back clearance – Provide minimum 600 mm clear space for general access and maintenance.

Floor mounted AHUs

DRAFT

## 3. Carbon Reduction Measures

### 3.1 Environmental Sustainability Indicators

A suite of environmental sustainability indicators in relation to energy and carbon emission reduction measures is provided as elective options classified in the following three (3) sections.

1

#### **Sustainable Design Strategies**

optimises the use of passive design strategies in response to local climate and site conditions to improve on indoor environmental quality while minimising energy use.

2

#### **Sustainable Construction**

promotes the adoption of sustainable practices, material procurement and design which inculcate responsible use and conservation of resources during construction and building operation.

3

#### **Sustainable Technologies**

encourages the provision of green building technologies that are oriented towards establishing low energy building consumption and smart control systems that could adapt to the users' needs and enhance building energy performance.

A selection of four (4) carbon reduction measures appropriate for the building development from the suite of environmental sustainability indicators provided in Table 3.1.1 and Table 3.1.2 will be required. There must have two (2) options from Sustainable Construction and one (1) option each from Sustainable design strategies and Sustainable Technologies as part of the requirements to meet the minimum environmental sustainability standard.

Table 3.1.1 – Carbon Reduction Measures for Residential Buildings

## Sustainable Design Strategies

optimises the use of passive design strategies in response to local climate and site conditions to improve on indoor environmental quality while minimising energy use.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>RBE01-1 Tropical Building Envelope Performance</b>	
<p>Enhance building envelope performance to minimise heat gain to internal spaces for better indoor thermal comfort with any of the following provisions :</p> <p>(a) Façade design with Residential Envelope Transmittance Value (RETV) of no more than 20 W/m<sup>2</sup>.</p> <p>(b) Application of cool paints that are certified by an approved local product certification body for 80% of the east and west facing external walls or roof areas.</p> <p>Note (1) The selected paint system must meet the allowable limits set for daylight reflectance as required under the Approved Document.</p> <p>(c) Provision of innovative façade technology or solutions such as the use of electrochromic glass, integration of photovoltaic modules, parametric façade and so on for at least 20% of the façade areas.</p>	Building envelope and roof
<b>RBE01-2 Naturally Ventilated Building Design</b>	
<p>Enhance indoor thermal comfort through the provision of building and unit layout design which facilitate good natural ventilation.</p> <p>(a) Building layout design comprises 40% of all units with window openings facing prevailing wind directions</p> <p>(b) Dwelling unit design comprises 30% of living rooms and bedrooms designed with effective inlet and outlet openings on either opposite or adjacent wall to facilitate good cross ventilation.</p> <p>(c) Design for natural ventilation with minimum coverage of 80% (by number) in at least two(2) of the following areas</p> <ul style="list-style-type: none"> <li>● Lift lobbies and Corridors</li> <li>● Staircases</li> <li>● Carparks</li> <li>● Common facilities</li> </ul>	Dwelling units and common areas

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>RBE01-3 Effective Daylighting</b>	
<p>Encourage design that optimise the use of effective natural lighting for better visual comfort.</p> <p>(a) Dwelling units : Daylighting provision for 25% of the total number of residential units that meets the desired lighting level of DA200lx, 50% in 60% of applicable areas (namely bedrooms, living room, family room and study room) based on daylight availability table provided.</p> <p><i>(Note: The daylight availability tables will be incorporated in the Code for compliance. At this juncture, you may wish to refer to GM RB2016 for more info on daylighting availability tables for better understanding.)</i></p> <p>(b) Common areas: Provision of daylighting with minimum coverage of 80% (by number) in at least two (2) of the following areas :</p> <ul style="list-style-type: none"> <li>• Lift lobbies and Corridors</li> <li>• Staircases</li> <li>• Carparks</li> <li>• Common facilities</li> </ul>	<p>Dwelling units, common areas and carparks</p>

Table 3.1.1 – Carbon Reduction Measures for Residential Buildings – Cont’d

**2**

**Sustainable Construction**

promotes the adoption of sustainable practices, material procurement and design which inculcate responsible use and conservation of resources during construction and building operation.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>RBE02-1 Resource Efficiency Measures</b>	
<p>Encourage design that optimizes resource efficiency and minimise waste generation in building construction.</p> <ul style="list-style-type: none"> <li>(a) Existing building structures with more than 50% of the floor and/or wall areas conserved for adaptive reuse.</li> <li>(b) Design with Concrete Usage Index (CUI) of not more than 0.48.</li> <li>(c) Embodied carbon reporting to account for the upfront carbon emissions of three (3) key construction materials namely, concrete, steel, and glass used in building developments.</li> </ul>	Building design and construction
<b>RBE02-2 Low Carbon Concrete</b>	
<p>Enhance carbon reduction potential through the use of following sustainable materials for construction.</p> <ul style="list-style-type: none"> <li>(a) Eco-friendly cement : Use of concrete (up to grade C50/60) with clinker content of less than 400 kg/m<sup>3</sup> or SGBC– certified concrete for 80% of the super-structural works.</li> <li>(b) Aggregate replacement : Use of recycled concrete aggregate (RCA), washed copper slag (WCS) and/or granite fines from approved sources that meet the minimum usage requirement (that is 1.5% x GFA for RCA and/or 0.75 x GFA for WCS or granite fines).</li> <li>(c) Processed waste : Use of NEWSand for non-structural application.</li> </ul>	Concrete building elements
<b>RBE02-3 Sustainable Products</b>	
<p>Encourage the specification and use of environmentally friendly products that are certified with Environmental Product Declaration (EPD) requirements or two-ticks rating by an approved local certification body.</p> <p>The provision shall include at least five (5) products for 80% of applicable areas or building components.</p>	Building products

Table 3.1.1 – Carbon Reduction Measures for Residential Buildings – Cont’d

**3**

**Sustainable Technologies**

encourages the provision of green building technologies that are oriented towards establishing low energy building consumption and smart control systems that could adapt to the users’ needs and enhance building energy performance.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>RBE03-1 Renewable Energy System</b>	
Encourage the use of on-site renewable energy sources to reduce the use of electricity by at least 10% of the expected total building electricity consumption of common facilities and areas.	Solar photovoltaic system
<b>RBE03-2 Smart Home Solutions</b>	
Encourage the provision of communication technology which enables some degree of automation and controls over key energy systems such as air-conditioning usage and lighting. There should also have suitable means that would minimally help homeowners to better manage their energy and water consumption in an intuitive manner. It can come in the form of web-based or mobile application to provide useful and timely information on utilities consumption and breakdown for units and/or common facilities.	Energy and water management system for homeowners or facility managers
<b>RBE03-3 Green Building Technologies</b>	
Encourage the adoption of green building technologies and integrative use of sensors which help reduce energy consumption. Examples of the systems that can be considered are as follows : <ul style="list-style-type: none"> <li>• Energy recovery system</li> <li>• Lifts with regenerative function</li> <li>• Occupancy sensors /controls for lighting in private lift lobbies, staircases or common toilets</li> <li>• Others (to be evaluated on a case to case basis)</li> </ul>	Building and sensor related technologies

Table 3.1.2 – Carbon Reduction Measures for Non-Residential Buildings

## Sustainable Design Strategies

optimises the use of passive design strategies in response to local climate and site conditions to improve on indoor environmental quality while minimising energy use.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>NRBE01-1 Tropical Building Envelope Performance</b>	
<p>Enhance building envelope performance to minimise heat gain to internal spaces for better indoor thermal comfort with any of the following provisions :</p> <p>(a) Façade design with Envelope Thermal Transmittance Value (ETTV) of no more than 40 W/m<sup>2</sup> or come with provision of good thermal bridging.</p> <p>(b) Application of cool paints that are certified by an approved local product certification body for 80% of the east and west facing external wall or roof areas.</p> <p>Note (1) The selected paint system must meet the allowable limits set for daylight reflectance as required under the Approved Document.</p> <p>(c) Provision of innovative façade technology or solutions such as use of electrochromic glass, integration of photovoltaic modules, parametric façade and so on for at least 20% of the façade areas.</p>	Building envelope and roof
<b>NRBE01-2 Naturally Ventilated Building Design</b>	
<p>Enhance indoor thermal comfort through the provision of building layout design which facilitate good natural ventilation.</p> <p>(a) Building layout design comprises 20% of all normally occupied spaces with openings facing prevailing wind directions</p> <p>(b) Design for natural ventilation with minimum coverage of 80% in at least two (2) of the following areas</p> <ul style="list-style-type: none"> <li>• Lift lobbies</li> <li>• Corridors</li> <li>• Staircases</li> <li>• Carparks</li> <li>• Atriums</li> <li>• Toilets</li> </ul>	Naturally ventilated occupied spaces and common areas

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE												
<b>NRBE01-3 Effective Daylighting</b>													
<p>Encourage the provision of effective natural lighting for better visual comfort.</p> <p>(a) Normally occupied spaces : Daylighting provision with desired lighting level and specific Daylight Autonomy (DA) requirements as outlined in the following table for a minimum 15% of total occupied areas using the daylighting availability tables provided. The provision must come with integration of daylighting controls.</p> <table border="1" data-bbox="245 638 980 1150"> <thead> <tr> <th>S/N</th> <th>Minimum Lighting Level Based on Space Occupancy Type</th> <th>Daylight Autonomy requirement per unit area of space</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Office, Institutional spaces where lux requirement is 500 lux</td> <td>DA500lx, 50%</td> </tr> <tr> <td>2</td> <td>Industrial, sports facilities, retail areas where lux requirement is 300 lux</td> <td>DA300lx, 50%</td> </tr> <tr> <td>3</td> <td>Hotel, resort-like and service apartment where lux requirement is 200 lux</td> <td>DA200lx, 50%</td> </tr> </tbody> </table> <p><i>(Note: The daylight availability table will be incorporated in the Code for compliance. At this juncture, you may wish to refer to GM NRB2015 for more info on daylighting availability table for better understanding.)</i></p> <p>(d) Common areas : Daylighting provision with integrated daylight controls for a minimum coverage of 80% (by number) in at least two (2) of the following areas</p> <ul style="list-style-type: none"> <li>• Lift lobbies</li> <li>• Corridors</li> <li>• Staircases</li> <li>• Carparks</li> <li>• Atriums</li> <li>• Toilets</li> </ul> <p>(b) Provision of daylight redirecting technologies such as light shelves or tubular daylight to enhance lighting level.</p>	S/N	Minimum Lighting Level Based on Space Occupancy Type	Daylight Autonomy requirement per unit area of space	1	Office, Institutional spaces where lux requirement is 500 lux	DA500lx, 50%	2	Industrial, sports facilities, retail areas where lux requirement is 300 lux	DA300lx, 50%	3	Hotel, resort-like and service apartment where lux requirement is 200 lux	DA200lx, 50%	<p>Normally occupied spaces and common areas</p>
S/N	Minimum Lighting Level Based on Space Occupancy Type	Daylight Autonomy requirement per unit area of space											
1	Office, Institutional spaces where lux requirement is 500 lux	DA500lx, 50%											
2	Industrial, sports facilities, retail areas where lux requirement is 300 lux	DA300lx, 50%											
3	Hotel, resort-like and service apartment where lux requirement is 200 lux	DA200lx, 50%											

Table 3.1.2 – Carbon Reduction Measures for Non-Residential Buildings – Cont’d

## Sustainable Construction

promotes the adoption of sustainable practices, material procurement and design which inculcate responsible use and conservation of resources during construction and building operation.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>NRBE02-1 Resource Efficiency Measures</b>	
<p>Encourage design that optimizes resource efficiency and minimise waste generation in building construction.</p> <ul style="list-style-type: none"> <li>(a) Existing building structures with more than 50% of the floor and/or facade areas conserved for adaptive reuse.</li> <li>(b) Design with Concrete Usage Index (CUI) of not more than 0.48.</li> <li>(c) Embodied carbon reporting to account for the upfront carbon emissions of three (3) key construction materials namely, concrete, steel and glass used in building developments.</li> </ul>	Building design and construction
<b>NRBE02-2 Low Carbon Concrete</b>	
<p>Enhance carbon reduction potential with the use of sustainable materials for construction.</p> <ul style="list-style-type: none"> <li>(a) Eco-friendly cement : Use of concrete (up to grade C50/60) with clinker content of less than 400 kg/m<sup>3</sup> or SGBC– Certified concrete for 80% of the super-structural works.</li> <li>(b) Aggregate replacement : Use of recycled concrete aggregate (RCA), washed copper slag (WCS) and/or granite fines from approved sources that meet the minimum usage requirement (that is 1.5% x GFA for RCA and/or 0.75 x GFA for WCS or granite fines).</li> <li>(c) Processed waste : Use of NEWSand for non-structural application.</li> </ul>	Concrete building elements
<b>NRBE02-3 Sustainable Products</b>	
<p>Encourage the specification and use of environmentally friendly products that are certified with Environmental Product Declaration (EPD) requirements or two-ticks rating by an approved local certification body.</p> <p>The provision shall include at least five (5) products for 80% of applicable areas or building components.</p>	Building products, mechanical and electrical products

Table 3.1.2 – Carbon Reduction Measures for Non-Residential Buildings – Cont’d

**3**

**Sustainable Technologies**

encourages the provision of green building technologies that are oriented towards establishing low energy building consumption and smart control systems that could adapt to the users’ needs and enhance building energy performance.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>NRBE03-1 Renewable Energy System</b>	
Encourage the use of on-site renewable energy sources to reduce the use of electricity by at least 1% of the expected total building electricity consumption.	Solar photovoltaic system
<b>NRBE03-2 Smart Building Solutions</b>	
<p>Encourage the provision of minimum three (3) building solutions which facilitates some form of automation and controls over building systems for better energy management and thermal comfort as listed below.</p> <ul style="list-style-type: none"> <li>(a) Use of BACnet, Modbus or any other open protocol as the network backbone of the building management system where data points can be used to facilitate communication and integration with other building systems.</li> <li>(b) Energy management system, applications and dashboard that help building owners and/or tenants to better manage their energy consumption in an intuitive manner.</li> <li>(c) Demand controlled ventilation system such as carbon dioxide sensors or devices to regulate the fresh air intake and ventilation based on occupants’ need.</li> <li>(d) Timer sensors/controls for lighting and ventilation systems in common areas and facilities .</li> <li>(e) Differential pressure monitoring equipment in Air Handling Units (AHUs).</li> <li>(f) Others (to be evaluated on a case to case basis)</li> </ul>	Building solutions that facilitate energy management and controls
<b>NRBE03-3 Green Building Technologies</b>	
<p>Encourage the adoption of low-carbon solutions and technologies which help reduce energy consumption. Examples of the systems that can be considered are as follows :</p> <ul style="list-style-type: none"> <li>• Energy recovery system</li> <li>• Lifts with regenerative function</li> <li>• Passive displacement ventilation system</li> <li>• Hybrid cooling system</li> <li>• Smart sensor and control technologies</li> <li>• Dedicated outdoor air system</li> <li>• Others (to be evaluated on a case to case basis)</li> </ul>	Building and sensor related technologies

# Summary of Key Changes to the Requirements under the Current Code for Environmental Sustainability of Buildings ( 3<sup>rd</sup> Edition)

Criteria Ref	Current Code for Environmental Sustainability of Buildings (3 <sup>rd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code for Environmental Sustainability of Buildings (4 <sup>th</sup> Edition)				
	<p><b>General</b></p> <p>The minimum Green Mark Score of 50 points and the stipulated pre-requisite requirements</p> <p>The criteria comprise 5 environmental impact categories namely                      Part 1 – Energy Efficiency                      Part 2 – Water Efficiency                      Part 3 – Environmental Protection                      Part 4 – Indoor Environmental Quality                      Part 5 – Other Green Features</p> <p>The score is the total of all the numerical scores assigned based on the degree of compliance with the applicable criteria listed under the 5 categories</p>		<p><b>General</b></p> <p>The minimum environmental sustainability standard (equivalent 50 points) shall have a level of environmental performance that meets all relevant base requirements and a selected number of sustainability indicators provided under Carbon Reduction Measures</p> <p>The Elective Options are broadly grouped in 3 Sections namely                      Section 1 – Sustainable Design Strategies                      Section 2 – Sustainable Construction                      Section 3 – Sustainable Technologies</p> <hr/> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; border-bottom: 1px solid black; padding-bottom: 5px;">RESIDENTIAL BUILDINGS</th> <th style="text-align: left; border-bottom: 1px solid black; padding-bottom: 5px;">NON-RESIDENTIAL BUILDINGS</th> </tr> </thead> <tbody> <tr> <td style="vertical-align: top; padding: 5px;">                     2 Base Requirements                      4 Carbon Reduction Measures in total with at least two (2) options from Sustainable Construction and one (1) option each from Sustainable Design Strategies and Technologies                 </td> <td style="vertical-align: top; padding: 5px;">                     6 Base Requirements                      *4 Carbon Reduction Measures in total with at least two (2) options from Sustainable Construction and one (1) option each from Sustainable Design Strategies and Technologies   <i>*Not applicable for building works that only involve the erection of simple structures and special functions such as link ways, underground passes, open sheds, standalone substation, lift upgrading, farm structures, workers' dormitories, treatment plants, transit facilities.</i> </td> </tr> </tbody> </table> <hr/> <p><i>Note that there are sub-clauses under the Base Requirements. # INDUSTRY CONSULTATION

## Proposed Changes to the Code for Environmental Sustainability Measures for Existing Buildings

Under Building Control (Environmental Sustainability Measures) Regulations 2013

# 1. Overview of Compliance Framework

## 1.1 Minimum Environmental Sustainability Standard

The level of environmental performance that meets all relevant Base Requirements and a selected number of sustainability indicators provided under the Elective Options are deemed to have met the minimum environmental sustainability standard of 50 points as prescribed in the Regulations.

## 2. Base Requirements

### 2.1 Environmental Sustainability Attributes

The Base Requirements comprises environmental sustainability attributes that are to be complied with, where applicable. The details are provided in the following Table 2.1.1.

Table 2.1.1 – Base Requirements for Existing Non-Residential Buildings	
SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<p><b>ENRB01 Building Energy Performance</b></p> <p>A building shall be designed and constructed with energy performance that meet minimum energy performance improvements of 40% over the 2005 baseline. This can be translated to 20% energy savings over current Singapore Standard and baseline.</p> <p>Compliance Level</p> <p>Compliance Options</p> <div style="text-align: center;"> <p><b>Building Energy Performance</b> 40% energy improvement over 2005 baseline</p> <pre> graph TD     A[Building Energy Performance 40% energy improvement over 2005 baseline] --&gt; B[Performance Based Approach]     A --&gt; C[Deemed-to-satisfy Provision]     B --&gt; D[Energy Savings using Energy Audit Methodology]     C --&gt; E[Energy Performance Standards for Key Building Systems]                     </pre> </div>	<p>Energy performance of building energy systems</p>
<p>The compliance with this requirement shall be demonstrated by way of energy audit or by meeting the respective performance standards set for key energy systems set out in the following sections.</p>	

**Table 2.1.1 – Base Requirements for Existing Non-Residential Buildings**

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE																																																								
<p><b>ENRB01-1 Performance Based Approach via Energy Audit</b></p> <p>Facilitate energy efficiency improvement of 20% by way of attaining the Energy Usage Intensity (EUI) stipulated after retrofits.</p> <table border="1" data-bbox="186 426 1070 1234"> <thead> <tr> <th colspan="4">Energy Use Intensity (EUI) for Different Building Categories (kWh/m<sup>2</sup>.yr)</th> </tr> <tr> <th colspan="2">Commercial</th> <th colspan="2">Healthcare</th> </tr> </thead> <tbody> <tr> <td>Office Buildings (Large)</td> <td>155</td> <td>Hospitals</td> <td>275</td> </tr> <tr> <td>Office Buildings (Small)</td> <td>135</td> <td>Community Hospitals</td> <td>230</td> </tr> <tr> <td>Hotels (Large)</td> <td>230</td> <td>Polyclinic</td> <td>150</td> </tr> <tr> <td>Hotels (Small)</td> <td>185</td> <td>Nursing/ Youth Homes</td> <td>90</td> </tr> <tr> <td>Retail Malls</td> <td>240</td> <td></td> <td></td> </tr> <tr> <th colspan="2">Educational</th> <th colspan="2">Others</th> </tr> <tr> <td>Institutions of Higher Learning (University, Polytechnics, ITE)</td> <td>130</td> <td>Sport and Recreation Centres</td> <td>110</td> </tr> <tr> <td>Private Schools and Colleges</td> <td>110</td> <td>Community Centres</td> <td>150</td> </tr> <tr> <td>Junior Colleges</td> <td>60</td> <td>Cultural Institution</td> <td>180</td> </tr> <tr> <td>Secondary Schools</td> <td>40</td> <td>Civic Buildings</td> <td>80</td> </tr> <tr> <td>Primary Schools</td> <td>40</td> <td>Mixed developments (by GFA mix)</td> <td></td> </tr> <tr> <td colspan="4"><i>Source : GM 2021 Framework</i></td> </tr> </tbody> </table> <p>The demonstration of the energy savings requirement shall be conducted via energy audit approach in accordance with the methodology and requirements stipulated.</p> <p><i>(Note: Conceptually, the energy audit approach will entail the need to establish the average EUI for past three years before retrofits begin. The expected EUI could be derived by considering the potential energy savings from the retrofits. For compliance, the expected EUI is required to meet the stipulated EUI for the same building category and the air-conditioning provision shall have a minimum total system efficiency TSE of 0.9 kW/RT during operation. More details will be provided in the Code later for better understanding.)</i></p>	Energy Use Intensity (EUI) for Different Building Categories (kWh/m <sup>2</sup> .yr)				Commercial		Healthcare		Office Buildings (Large)	155	Hospitals	275	Office Buildings (Small)	135	Community Hospitals	230	Hotels (Large)	230	Polyclinic	150	Hotels (Small)	185	Nursing/ Youth Homes	90	Retail Malls	240			Educational		Others		Institutions of Higher Learning (University, Polytechnics, ITE)	130	Sport and Recreation Centres	110	Private Schools and Colleges	110	Community Centres	150	Junior Colleges	60	Cultural Institution	180	Secondary Schools	40	Civic Buildings	80	Primary Schools	40	Mixed developments (by GFA mix)		<i>Source : GM 2021 Framework</i>				<p>Air-conditioning system (inclusive of air-distribution system) and lighting provision. 0.78 kW/RT <i>(inclusive of site deration factor)</i>	0.85 kW/RT						
<b>ENRB01-2(b) Lighting System</b>							
Reduce energy required to illuminate interior spaces with proper lighting level. The lighting provision shall be at least 40% more energy efficient than the prescribed lighting power budget stated in SS 530 – Code of Practice for Energy Efficiency Standard for Building Services and Equipment.	Lighting provision						
<b>ENRB01-2(c) Mechanical Ventilation System</b>							
Reduce energy required to supply and distribute fresh air within the space by having energy efficient mechanical ventilation system and controls. <ol data-bbox="224 1465 1130 1759" style="list-style-type: none"> <li>(i) Provision of mechanical ventilation system of at least 10% more energy efficient than the prescribed standard stated in SS 553 for normally occupied spaces that utilise mechanical ventilation as the preferred ventilation mode.</li> <li>(ii) Provision of Carbon Monoxide (CO) detection sensor control with Variable Speed Drive (VSD) to regulate demand for mechanical ventilation in carpark areas.</li> </ol>	Mechanical ventilation for normally occupied spaces and carpark areas if there is replacement						
<b>ENRB01-2(d) Vertical Transportation System</b>							
Reduce energy consumption by providing energy efficient vertical transportation systems that are equipped with variable voltage variable frequency (VVVF) drives and sleep mode features.	Lifts and/or escalators if there are replacements						

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<b>ENRB02 Measurement and Verification (M &amp; V) Instrumentation</b>	
Facilitate energy management and monitoring of air-conditioning system operating efficiency with the provision of permanent measuring instrumentation.	Energy measurement and management of air-conditioning systems
<b>ENRB02-1 Instrumentation for Chilled Water Air-Conditioning System</b>	
<p>Provision of permanent measuring instruments for monitoring of the energy performance of the chilled water plants and air distribution systems.</p> <p>The installed instrumentation must have the capability to calculate the resultant system efficiency within 5% of its true value in accordance with SS 591: 2013. Each measurement system shall include sensors, any signal conditioning, data acquisition system and the wiring connecting these components.</p> <p>The permanent measuring instruments and devices are to be accessible<sup>see note (5)</sup> and should not be located directly above the chillers, to facilitate verification and maintenance. They must be installed in accordance with the manufacturers' recommendation and SS 591: 2013. The measurement systems provided shall also comply with the following requirement:</p> <ul style="list-style-type: none"> <li>(a) All data logging with capability to trend at 1-minute sampling time interval, and recorded to the 3rd decimal digit;</li> <li>(b) Building management system (BMS), standalone energy monitoring system (EMS) shall have capability to compute and display of key indicators including total system energy efficiency and its component (water-side and air-side efficiency) as well as the calculated heat balance of the chilled water system;</li> <li>(c) Magnetic in-line flow meter, with 1% uncertainty and capable of electronic in-situ verification to within <math>\pm 2\%</math> of its original factory calibration. If installation of magnetic in-line meters is not possible, ultrasonic flow meters or other flow meters that can meet the indicated performance may be used;</li> <li>(d) Temperature sensors are to be provided for chilled water and condenser water loop and shall have an end-to-end measurement uncertainty within <math>\pm 0.05^\circ\text{C}</math> over the entire measurement range. Each temperature measurement location shall have test-plugs or additional thermowells located before and after each temperature sensor along the chilled water and condenser water lines for verification of measurement accuracy. All thermo-wells shall be installed in a manner that enables the sensors to be in direct contact with fluid flow; and</li> </ul>	Instrumentation for water cooled and air cooled chilled water system

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
<p>(e) Dedicated power meters (of IEC Class 1 or better) and metering current transformers (of Class 1 or better) where applicable, are to be provided for each of the following groups of equipment where applicable: chillers, chilled water pumps, condenser water pumps, cooling towers, air-distribution sub-system (i.e. AHUs, PAHUs, FCUs<sup>see note 6</sup>).</p> <p>(f) A heat balance substantiating test for the chilled water system is to be computed in accordance to SS 591 for verification of the accuracy of the M &amp; V instrumentation. To meet the accuracy requirement, more than 80% of the heat balance (%) derived over the entire normal operating hours is to be within 5% for a period of one (1) week.</p> <p>Note :</p> <p>(5) The temperature sensors are best placed in an accessible location with mounting height of not more than 3m, where possible. Otherwise, there should be evidence of provision for access by way of mobile platform or other suitable form.</p> <p>(6) Where the FCUs' power consumption could not be provided, evidences of nameplate power can be provided to derive the air-distribution efficiency without the need for sub-metering.</p>	
<b>ENRB02-2 Instrumentation for Variable Refrigerant Flow (VRF) System</b>	
<p>Provision of permanent measuring instruments for monitoring of the energy performance of the Variable Refrigerant Flow (VRF) condensing units and air-distribution systems.</p> <p>The installed instrumentation must have the capability to calculate the resultant system efficiency within 10% uncertainty. Each measurement system shall include sensors, any signal conditioning, data acquisition system and the wiring connecting these components.</p> <p>The measurement systems provided shall also comply with the following requirement:</p> <p>(a) All data logging with capability to trend at 5-minute sampling time interval, and recorded to the 3rd decimal digit;</p> <p>(b) Building management system (BMS), standalone energy monitoring system (EMS) shall have capability to compute and display of the overall system energy efficiency and to facilitate data extraction for verification purpose.</p>	<p>Instrumentation for VRF systems which serve an aggregate conditioned floor areas of 2000 m<sup>2</sup> or more</p>

SUSTAINABILITY ATTRIBUTES	APPLICABILITY & SCOPE
(c) Dedicated power meters (of IEC Class 1 or better) and metering current transformers (of Class 1 or better) where applicable, are to be provided for all condensing units of the VRF system and air-distribution sub-systems (i.e. AHUs, PAHUs, FCUs <sup>see note 6</sup> ).	
<b>ENRB03 Real Time Remote Monitoring of Chiller Plant System Operation</b>	
Facilitate real time diagnostic and monitoring of chiller plant system operation with the provision of web-based control system with remote access functionality.	Energy measurement and management
<b>ENRB04 Energy Utilisation Reporting</b>	
Encourage monitoring of the building energy consumption trend over time and review of energy efficiency measures and improvement plan.	Energy use trending and improvement
<b>ENRB05 Indoor Temperature</b>	
Minimise incidences of overcooling and energy wastage by ensuring that the normal dry-bulb temperature for indoor spaces is maintained at 23°C and above.	Indoor air temperature
<b>ENRB06 Indoor Air Quality (IAQ) Audit</b>	
Facilitate improvement on indoor environmental quality by way of a post-retrofit IAQ audit. The audit shall be conducted by an accredited laboratory under Singapore Accreditation Council with respect to the recommended IAQ parameters and acceptable limits stated in Table 1 of <i>SS554: 2016 Code of Practice for Indoor Air Quality for Air-Conditioned Buildings</i> or in Annex E of NEA's <i>Guidelines for Good Indoor Air Quality in Office Premises</i>	Indoor air quality

---

## 3. Carbon Reduction Measures

### 3.1 Environmental Sustainability Indicators

A suite of environmental sustainability indicators in relation to carbon reduction measures is provided as elective options for selection. These elective options are broadly classified to three sections as detailed in the following chart :

1

#### **Sustainable Features**

encourages incorporation of cost effective green features and passive strategies when building upgrade so as to minimise the overall building energy consumption and to improve on indoor thermal comfort.

2

#### **Sustainable Operation and Management**

facilitates smart monitoring and integration of sustainability management practices to maximise operational efficiency and carbon reduction opportunities.

3

#### **Sustainable Technologies**

encourages the provision of green technology that is oriented towards establishing low energy building consumption and smart control systems that could adapt to the users' needs and facilitate better building performance management.

A selection of three (3) elective options appropriate for the building development from the suite of environmental sustainability indicators provided in Table 3.1.1 will be required. There must be one option from each section (namely Sustainable Features, Sustainable Operation and Management and Sustainable Technologies) as part of the requirement to meet the minimum environmental sustainability standard.

Table 3.1.1 – Base Requirements for Existing Non-Residential Buildings

## Sustainable Features

encourages incorporation of cost effective green features and passive strategies when building upgrade so as to minimise the overall building energy consumption and to improve on indoor thermal comfort.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>ENRBE01-1 Building Envelope Enhancement</b>	
<p>Enhance building envelope performance to minimise heat gain to internal spaces for better indoor thermal comfort with any of the following provisions :</p> <p>(a) Façade design with Envelope Thermal Transmittance Value (ETTV) of no more than 40 W/m<sup>2</sup>.</p> <p>(b) Application of cool paints that are certified by an approved local product certification body for 80% of the east and west facing external wall and/or roof areas.</p> <p>Note (1) The selected paint system must meet the allowable limits set for daylight reflectance as required under the Approved Document.</p> <p>(c) Provision of innovative façade technology or solutions such as the use of electrochromic glass, integration of photovoltaic modules, parametric façade and so on for at least 20% of the façade areas.</p>	Building envelope
<b>ENRBE01-2 Natural Ventilation Strategies</b>	
Reduce energy demand for cooling and ventilation by way of enhanced provision of naturally ventilated spaces by at least 5% of the applicable areas.	Naturally ventilated occupied spaces and common areas
<b>ENRBE01-3 Sustainable Products</b>	
<p>Encourage the specification and use of environmentally friendly products that are certified with Environmental Product Declaration (EPD) requirements or two-ticks rating by an approved local certification body.</p> <p>The provision shall include at least three (3) products for 80% of applicable areas or building components.</p>	Building products mechanical and electrical products

Table 3.1.1 – Base Requirements for Existing Non-Residential Buildings – Cont’d

**2**

**Sustainable Operation and Management**

facilitates smart monitoring and integration of sustainability management practices to maximise operational efficiency and carbon reduction opportunities.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
---------------------------	-----------------------

<b>ENRBE02-1 Electrical Sub-Metering for Major Energy Use</b>	
---	--

Facilitate measurement and monitoring of major energy end uses for energy management and audit. Separate sub-meters shall be provided and linked to a monitoring system that can measure and trend energy consumption data of the following systems:

Energy measurement and management of other energy systems when upgrade

Sub-System for Metering	
Lifts and escalators	More than 5 numbers or sets or with sum of all feeders > 50 kVA.
Mechanical Ventilation Systems	Total subsystem’s load > 15 kW Sub-metering applicable to individual fan system motors that are more than 1.5 kW in the following areas <ul style="list-style-type: none"> <li>• Normally Occupied Spaces</li> <li>• M &amp; E Plant Rooms</li> <li>• Carparks</li> </ul>
Centralised hot water supply system	> 50 kW thermal heating capacity
General power supply and lighting systems for tenancy areas and owners’ premises	Sub-metering for tenancy areas and owners’ premises are to be separated. The sub-circuits serving these areas can be provided based on sub-system basis and /or per floor level.  If there is a need to cater to high plug loads or process loads exceeding 50 kVA in areas such as manufacturing, carpark, data centre, EV charging stations, please provide separate sub-metering for these specific areas to better manage the energy consumption, where relevant.

Note (2) : The provision of sub-metering for chiller plant systems and VRF system are covered under ENRB02.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>ENRBE02-2 Maintenance of Building Cooling System Performance</b>	
<p>Ensure adequate service clearances so that the building cooling system performance can be maintained after system upgrade.</p> <p><i>Service clearances are to be provided as per manufacturers' specification or prescribed standards stated in the following clauses, whichever governs.</i></p>	<p>Space requirements for water cooled and air cooled chilled water system provision</p>
<b>ENRBE02-2(a) Chillers</b>	
<p>Access space provisions are as follows :</p> <ul style="list-style-type: none"> <li>(i) Clear space of 2 m or more at the front of chiller unit piping section for tube maintenance and cleaning, repair and replacement of bigger components;</li> <li>(ii) Clearance of 1.2 m or more between the chillers measured from plinth to plinth for regular maintenance; and</li> <li>(iii) Overhead service clearance of 1.5 m or more above the chiller for overhaul maintenance.</li> </ul>	<p>Chillers</p>
<b>ENRBE02-2(b) Pump Systems</b>	
<p>Access space provisions are as follows :</p> <ul style="list-style-type: none"> <li>(i) Except for the areas where the pipes are connected, a clearance of 0.6 m or more is to be provided round the pump for regular maintenance; and</li> <li>(ii) Clear head room space of 1 m or more above the pump and motor to facilitate overhaul maintenance or replacement.</li> </ul>	<p>Chilled water pumps (CHWP) and condensers water pumps (CWP)</p>
<b>ENRBE02-2(c) Cooling Towers</b>	
<p>Maintenance provisions are as follows :</p> <ul style="list-style-type: none"> <li>(i) Provision of maintenance platform, stairs and catwalks of 600 mm width or more with handrails around the cooling towers and access to the level for periodic maintenance, inspection of water basin and fill media; and</li> <li>(ii) Clear space of 2 m or more from the top of cooling towers to location of the trellis, where applicable.</li> </ul> <p>Note (3) : Proper clearances on all sides of the cooling tower should be provided in accordance with manufacturer's technical recommendation to ensure the heat rejection performance of cooling towers is not affected or should not be less than the lateral width of the cooling tower, whichever governs.</p>	<p>Cooling towers</p>

<b>ENRBE02-2(d) Air-Distribution Systems</b>	
<p>Air handling units (AHU) of cooling capacity greater than 35 kW shall be floor mounted as stipulated in SS 553. The access space provisions are as follows :</p> <ul style="list-style-type: none"> <li>(i) AHU access – Provide minimum 1m clear space from the AHU room door entrance to the AHU for general maintenance ;</li> <li>(ii) Cooling coil pipe and filter access – Provide minimum 800 mm clear space after pipe connection to facilitate cooling coil cleaning and filter access;</li> <li>(iii) Fan access – Provide minimum 800 mm clear space for fan/motor access and maintenance (if the access is not from cooling coil connection side); and</li> <li>(iv) AHU side and back clearance – Provide minimum 600 mm clear space for general access and maintenance.</li> </ul>	Floor mounted AHUs
<b>ENRBE02-3 User Engagement Plan</b>	
<p>Encourage the provision of user engagement plan and strategies that facilitate users’ involvement and contribution in reducing the overall carbon footprint. It should have a combination of minimum two strategic approaches such as sustainability related activities, educational programmes, green fit-out guidelines, green lease or incentives for tenants meeting measurable outcome.</p>	Approaches adopted must have users’ involvement

Table 3.1.1 – Base Requirements for Existing Non-Residential Buildings – Cont’d

**3**

**Sustainable Technologies**

encourages the provision of green technology that is oriented towards establishing low energy building consumption and smart control systems that could adapt to the users’ needs and facilitate better building performance management.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>ENRBE03-1 Renewable Energy System</b>	
Encourage the use of on-site renewable energy sources to reduce the use of electricity by at least 1% of the expected total building electricity consumption.	Solar photovoltaic system
<b>ENRBE03-2 Smart Building Solutions</b>	
Encourage the provision of minimum three (3) building solutions which facilitates some form of automation and controls over building systems for better energy management and thermal comfort as listed below. <ul style="list-style-type: none"> <li>(a) Use of BACnet, Modbus or any other open protocol as the network backbone of the building management system where data points can be used to facilitate communication and integration with other building systems.</li> <li>(b) Energy management system, applications and dashboard that help building owners and/or tenants to better manage their energy consumption in an intuitive manner</li> <li>(c) Demand controlled ventilation system such as carbon dioxide sensors or devices to regulate the fresh air intake and ventilation based on occupants’ need.</li> <li>(d) Timer sensors/controls for lighting and ventilation systems in common areas and facilities</li> <li>(e) Differential pressure monitoring equipment in Air Handling Units (AHUs)</li> <li>(f) Others (to be evaluated on a case to case basis)</li> </ul>	Building solutions that facilitate energy management and controls

Table 3.1.1 – Base Requirements for Existing Non-Residential Buildings – Cont’d

**3**

### Sustainable Technologies

encourages the provision of green technology that is oriented towards establishing low energy building consumption and smart control systems that could adapt to the users’ needs and facilitate better building performance management.

SUSTAINABILITY INDICATORS	APPLICABILITY & SCOPE
<b>ENRBE03-3 Green Building Technologies</b>	
<p>Encourage the adoption of low-carbon solutions and technologies which help minimise energy consumption. Examples of the systems that can be considered are as follows :</p> <ul style="list-style-type: none"> <li>• Energy recovery system</li> <li>• Lifts with regenerative function</li> <li>• Passive displacement ventilation system</li> <li>• Hybrid cooling system</li> <li>• Smart sensor and control technologies</li> <li>• Dedicated outdoor air system</li> <li>• Others (to be evaluated on a case to case basis)</li> </ul>	<p>Building and sensor related technologies</p>

# Summary of Key Changes to the Requirements

## under the Current Code on Environmental Sustainability Measures for Existing Buildings (2nd Edition)

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)
	<p><b>General</b></p> <p>The minimum environmental sustainability standard can be met by meeting the stipulated requirements which is deemed to meet 50 points as required.</p> <p>There is a total of seven requirements/conditions covering that need to be fulfilled for regulatory compliance and as follows.</p> <p>P1 – Energy Consumption Monitoring            P2 – Air Conditioning System Minimum Operating Efficiency            P3 – Energy Improvement on Lighting System            P4 – Water Consumption Monitoring            P5 – Chiller Plant Measurement and Verification (M&amp;V) Instrument            P6 – Indoor Temperature            P7 – Indoor Air Quality (IAQ) Surveillance Audit</p>		<p><b>General</b></p> <p>The minimum environmental sustainability standard (equivalent 50 points) shall have a level of environmental performance that meets all relevant base requirements and a selected number of sustainability indicators provided under Elective Options</p> <p>The Elective Options are broadly grouped in 3 Sections namely            Section 1 – Sustainable Features            Section 2 – Sustainable Operation and Management            Section 3 – Sustainable Technologies</p> <hr/> <p><b>NON-RESIDENTIAL BUILDINGS</b></p> <p>6 Base Requirements            3 Carbon reduction measures in total with one measure from each of the three sections under Sustainable features, Sustainable Operation and Management and Sustainable Technologies</p> <hr/> <p><i>Note that there are sub-clauses under the Base Requirements for non-residential buildings - 6 sub-clauses that are to be complied with, where relevant.</i></p> <hr/>

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)
	<p><i>Note : No requirement on mechanical ventilation under Current Code</i></p>	ENRB01-2(c)	<p><b>Mechanical Ventilation System</b></p> <p>Reduce energy required to supply and distribute fresh air within the space by having energy efficient mechanical ventilation system and controls.</p> <ul style="list-style-type: none"> <li>(i) Provision of mechanical ventilation system of at least 10% more energy efficient than the prescribed standard stated in SS 553 for normally occupied spaces that utilise mechanical ventilation as the preferred ventilation mode</li> <li>(ii) Provision of Carbon Monoxide (CO) detection sensor control with Variable Speed Drive (VSD) to regulate demand for mechanical ventilation in carpark areas.</li> </ul> <p><i>Note:</i></p> <p><i>(1) There is a minimum energy improvement of 10% over baseline stipulated in SS 553 which is applicable only to the normally occupied spaces and carpark areas.</i></p> <p><i>(2) Only applicable if there is a replacement of the mechanical ventilation system.</i></p>
	<p><i>Note : No requirement on vertical transportation system under Current Code</i></p>	ENRB 01-2(d)	<p><b>Vertical Transportation System</b></p> <p>Reduce energy consumption by providing energy efficient vertical transportation systems that are equipped with variable voltage variable frequency (VVVF) drives and sleep mode features.</p> <p><i>Note: Only applicable if there is a replacement of the lift and escalator</i></p>
P5	<p><b>Measurement and Instrumentation Requirements for water cooled chilled water air conditioning system</b></p> <p>To provide permanent measuring instruments for monitoring of chilled water system operating efficiency. The installed instrumentation shall have the capability to calculate the resultant operating system efficiency (i.e. kW/RT) within 5% of its true value and in accordance with SS 591. Each measurement system shall</p>	ENRB02-1	<p><b>Measurement and Verification (M &amp; V) Instrumentation</b></p> <p><b>Instrumentation for Chilled Water Air-Conditioning System</b></p> <p>Provision of permanent measuring instruments for monitoring of the energy performance of the chilled water plants and air distribution systems.</p> <p>The installed instrumentation must have the capability to calculate the resultant system efficiency within 5% of its true value in accordance with</p>

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)
	include the sensor(s), any signal conditioning, the data acquisition system and wiring connecting these components.		<p>SS 591: 2013. Each measurement system shall include sensors, any signal conditioning, data acquisition system and the wiring connecting these components.</p> <p>The permanent measuring instruments and devices are to be accessible<sup>see note (5)</sup> and should not be located directly above the chillers, to facilitate verification and maintenance. They must be installed in accordance with the manufacturers' recommendation and SS 591: 2013. The measurement systems provided shall also comply with the following requirement:</p> <ul style="list-style-type: none"> <li>(a) All data logging with capability to trend at 1-minute sampling time interval, and recorded to the 3rd decimal digit;</li> <li>(b) Building management system (BMS), standalone energy monitoring system (EMS) shall have capability to compute and display of key indicators including total system energy efficiency and its component (water-side and air-side efficiency) as well as the calculated heat balance of the chilled water system;</li> <li>(c) Magnetic in-line flow meter, with 1% uncertainty and capable of electronic in-situ verification to within <math>\pm 2\%</math> of its original factory calibration. If installation of magnetic in-line meters is not possible, ultrasonic flow meters or other flow meters that can meet the indicated performance may be used;</li> <li>(d) Temperature sensors are to be provided for chilled water and condenser water loop and shall have an end-to-end measurement uncertainty within <math>\pm 0.05^\circ\text{C}</math> over the entire measurement range. Each temperature measurement location shall have test-plugs or additional thermowells located before and after each temperature sensor along the chilled water and condenser water lines for verification of measurement accuracy. All thermo-wells shall be installed in a manner that enables the sensors to be in direct contact with fluid flow; and</li> <li>(e) Dedicated power meters (of IEC Class 1 or better) and metering current transformers (of Class 1 or better) where applicable, are to be provided for each of the following groups of equipment where applicable: chillers, chilled water pumps, condenser water pumps,</li> </ul>

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)
			<p>cooling towers, air-distribution sub-system (i.e. AHUs, PAHUs, FCUs).</p> <p>(f) A heat balance substantiating test for the chilled water system is to be computed in accordance to SS 591 for verification of the accuracy of the M &amp; V instrumentation. To meet the accuracy requirement, more than 80% of the heat balance (%) derived over the entire normal operating hours is to be within 5% for a period of one (1) week.</p> <p><i>Note :</i></p> <p><i>(1) The temperature sensors are best placed in an accessible location with mounting height of not more than 3m, where possible. Otherwise, there should be evidence of provision for access by way of mobile platform or other suitable form.</i></p> <p><i>(2) It is a new requirement to have dedicated power meters to be provided for air-distribution sub-systems (that is AHUs, PAHUs, FCUs). In the case of FCUs, if submetering cannot be provided, the evidences of way of nameplate motors can be considered.</i></p>
	<p><i>Note : No requirement on VRF system under Current Code</i></p>	ENRB02-2	<p><b>Instrumentation for Variable Refrigerant Flow (VRF) system</b></p> <p>Provision of permanent measuring instruments for monitoring of the energy performance of the Variable Refrigerant Flow (VRF) condensing units and air-distribution systems.</p> <p>The installed instrumentation must have the capability to calculate the resultant system efficiency within 10% uncertainty. Each measurement system shall include sensors, any signal conditioning, data acquisition system and the wiring connecting these components.</p>

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)
			<p>The measurement systems provided shall also comply with the following requirement:</p> <ul style="list-style-type: none"> <li>(a) All data logging with capability to trend at 5-minute sampling time interval, and recorded to the 3rd decimal digit;</li> <li>(b) Building management system (BMS), standalone energy monitoring system (EMS) shall have capability to compute and display of the overall system energy efficiency and to facilitate data extraction for verification purpose; and</li> <li>(c) Dedicated power meters (of IEC Class 1 or better) and metering current transformers (of Class 1 or better) where applicable, are to be provided for all condensing units of the VRF system and air-distribution sub-systems (i.e. AHUs, PAHUs, FCUs).</li> </ul> <p><i>Note : This is a new requirement to cover instrumentation for VRF system for better energy monitoring. It is only applicable if the VRF system serve an aggregate conditioned floor areas of 2000 m<sup>2</sup> or more.</i></p>
	<p><i>Note: No requirement on real time remote monitoring of chiller plant system operation</i></p>	ENRB03	<p><b>Real Time Remote Monitoring of Chiller Plant System Operation</b></p> <p>Facilitate real time diagnostic and monitoring of chiller plant system operation with the provision of web-based control system with remote access functionality.</p>
P1	<p><b>Energy Consumption Monitoring</b></p> <p>To compute and monitor the building’s Energy Use Intensity (EUI) for the past 3 years and review its energy efficiency improvement plan, where necessary</p>	ENRB04	<p><b>Energy Utilisation Reporting</b></p> <p>Encourage monitoring of building energy consumption trend over the past 3 years and review of energy efficiency improvement plan and measures. <i>Note: This is similar to current Code</i></p>

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)
P6	<p><b>Indoor Temperature</b></p> <p>To maintain the indoor dry-bulb temperature at 23°C and above to prevent overcooling</p>	ENRB05	<p><b>Indoor Temperature</b></p> <p>Minimise incidences of overcooling and energy wastage by ensuring that the normal dry-bulb temperature for indoor spaces is maintained at 23°C and above.</p> <p><i>Note: This is the same as current Code</i></p>
P7	<p><b>Indoor Air Quality (IAQ) Surveillance Audit</b></p> <p>To conduct an IAQ surveillance audit once every 3 years. The audit shall be conducted by an accredited laboratory under Singapore Accreditation Council with respect to the recommended IAQ parameters and acceptable limits stated in Table 1 of <i>SS554: 2016 Code of Practice for Indoor Air Quality for Air-Conditioned Buildings</i> or in Annex E of NEA's <i>Guidelines for Good Indoor Air Quality in Office Premises</i>.</p>	ENRB06	<p><b>Indoor Air Quality (IAQ) Audit</b></p> <p>Facilitate improvement on indoor environmental quality by way of a post-retrofit IAQ audit. The audit shall be conducted by an accredited laboratory under Singapore Accreditation Council with respect to the recommended IAQ parameters and acceptable limits stated in Table 1 of <i>SS554: 2016 Code of Practice for Indoor Air Quality for Air-Conditioned Buildings</i> or in Annex E of NEA's <i>Guidelines for Good Indoor Air Quality in Office Premises</i></p> <p><i>Note: This is the same as current Code</i></p>
<b>Part 2 – Elective Options Under Section 1 : Sustainable Design Strategies</b>			
	<p><i>Note : No requirement on Building Envelope Enhancement under current Code</i></p>	ENRBE01-1	<p><b>Building Envelope Enhancement</b></p> <p>Enhance building envelope performance to minimise heat gain to internal spaces for better indoor thermal comfort with any of the following provisions :</p> <ul style="list-style-type: none"> <li>(a) Façade design with Envelope Thermal Transmittance Value (ETTV) of no more than 40 W/m<sup>2</sup>.</li> <li>(b) Application of cool paints that are certified by an approved local product certification body for 80% of the east and west facing external wall and/or roof areas.</li> </ul> <p>Note (1) The selected paint system must meet the allowable limits set for daylight reflectance as required under the Approved Document.</p> <ul style="list-style-type: none"> <li>(c) Provision of innovative façade technology or solutions such as the use of electrochromic glass, integration of photovoltaic modules, parametric façade and so on for at least 20% of the façade areas.</li> </ul>

Criteria Ref	Current Code on Environmental Sustainability Measures for Existing Buildings (2 <sup>nd</sup> Edition)	Criteria Ref	Requirements to be incorporated in upcoming Code on Environmental Sustainability Measures for Existing Buildings (3 <sup>rd</sup> Edition)						
	<i>Note : No requirement on Natural Ventilation Strategies under current Code</i>	ENRBE01-2	<p><b>Natural Ventilation Strategies</b></p> <p>Reduce energy demand for cooling and ventilation by way of enhanced provision of naturally ventilated spaces by at least 5% of the applicable areas.</p> <p><i>Note: Applicable to occupied spaces and common areas</i></p>						
	<i>Note : No requirement on Sustainable Products under current Code</i>	ENRBE01-3	<p><b>Sustainable Products</b></p> <p>Encourage the specification and use of environmentally friendly products that are certified with Environmental Product Declaration (EPD) requirements or two-ticks rating by an approved local certification body.</p> <p>The provision shall include at least five (5) products for 80% of applicable areas or building components.</p> <p><i>Note: Applicable to building products / Mechanical and Electrical products</i></p>						
<b>Part 2 – Elective Options Under Section 2 : Sustainable Operation and Management</b>									
	<i>Note : No requirement on Electrical Sub-Metering for Major Energy Use under current Code</i>	ENRBE02-1	<p><b>Electrical Sub-Metering for Major Energy Use</b></p> <p>Facilitate measurement and monitoring of major energy end uses for energy management and audit. Separate sub-meters shall be provided and linked to a monitoring system that can measure and trend energy consumption data of the following systems:</p> <table border="1" data-bbox="1294 1206 2134 1422" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2" data-bbox="1294 1206 2134 1254" style="text-align: center;">Sub-System for Metering</th> </tr> </thead> <tbody> <tr> <td data-bbox="1294 1254 1592 1337">Lifts and escalators</td> <td data-bbox="1592 1254 2134 1337">More than 5 numbers or sets or with sum of all feeders &gt; 50 kVA.</td> </tr> <tr> <td data-bbox="1294 1337 1592 1422">Mechanical Ventilation Systems</td> <td data-bbox="1592 1337 2134 1422">Total subsystem's load &gt; 15 kW</td> </tr> </tbody> </table>	Sub-System for Metering		Lifts and escalators	More than 5 numbers or sets or with sum of all feeders > 50 kVA.	Mechanical Ventilation Systems	Total subsystem's load > 15 kW
Sub-System for Metering									
Lifts and escalators	More than 5 numbers or sets or with sum of all feeders > 50 kVA.								
Mechanical Ventilation Systems	Total subsystem's load > 15 kW
